HOYT COMPOUND BOW LIMITED LIFETIME WARRANTY

All Hoyt compound bows are guaranteed against manufacturing defects in materials or workmanship to the original owner on all risers, limbs, limb pockets, and eccentrics for the life of the product.*

*For all warranty details see page 16 of this Owner's Manual or hoyt.com.

Bows purchased over the Internet or through mail order void all warranty.
Congratulations on the purchase of your new Hoyt bow. We are excited and grateful to have you as a part of Team Hoyt. You will be pleased to know that you have purchased the most technologically advanced and dependable bow on the market. Only the finest components go into every Hoyt bow along with over 85 years of industry leading experience in bow technology and manufacturing. With proper use and some basic maintenance, your new bow will provide you with years of great shooting and dependability.

Archery is a very enjoyable form of recreation for people of all ages and abilities. It is important to note that archery equipment, when not used properly, can create a dangerous situation, including death and serious personal injury for the archer or those around them. It is up to you to be a responsible archer, protect both yourself and others when enjoying this great sport. Whether you are an experienced archer or have never shot a bow, you must READ THIS ENTIRE MANUAL CAREFULLY before using your bow. Following all warnings and instructions contained in this manual will help ensure you and others have the safest and most enjoyable shooting experience possible. Keep this owner’s manual handy and reference it often. Should you lose this manual you can find a current manual online at www.hoyt.com. Good luck and safe shooting!

**WARNINGS**

**WARNING:** This manual contains several safety warnings and instructions preceded with the signal words **WARNING**, **CAUTION**, and **NOTICE**. These signal words are designed to draw your attention to important safety information. **WARNING:** indicates a hazardous situation, which, if not avoided, could result in death or serious personal injury. **CAUTION** indicates a hazardous situation, which, if not avoided, could result in minor personal injury. **NOTICE** addresses safety practices not related to personal injury.

---

**Read This Manual Carefully Before Handling or Using Your Hoyt Bow. This Manual Contains Important Safety Information and Warranty Information.**

READ THIS MANUAL CAREFULLY BEFORE HANDLING OR USING YOUR HOYT BOW. YOU ARE RESPONSIBLE FOR ARCHERY SAFETY. Read and follow all warnings and guidelines for safe operating procedures at www.hoyt.com/safety/warnings

The warnings contained within this owner’s manual were current at time of printing. For the most up-to-date information, please visit www.hoyt.com

---

**WARNINGS**

**WARNING:** Always read the warning labels and manufacturer’s instructions of all products being used in conjunction with a Hoyt bow, including but not limited to archery accessories and components directly attached to the bow or used in conjunction with the bow such as targets, arrows, broadband, release aids, etc.

**WARNING:** It is critical that your bow is set up and functioning within the bow’s required safe operating parameters prior to use. Hoyt recommends that only a Genuine Hoyt Retailer setup and inspect your archery equipment to ensure that it is set up within the bow’s safe operating parameters. (See page 2 for definition of Hoyt Bow Safe Operating Parameters)

**WARNING:** Avoid severe personal injury, to yourself or bystanders, as well as damage to your bow, if it is the utmost importance of that your Hoyt approved bow setup and use is properly adjusted. **STANDARD BOW PRESSURES CANNOT BE USED** and may result in bow failure and personal injury. Hoyt recommends that only a Genuine Hoyt Retailer press your bow. See page 10 for guidelines on pressuring Hoyt bows.

**WARNING:** Carefully inspect your bow before each use. Before you handle or shoot your bow, carefully inspect the condition of your bow, accessories, arrows, and your release aid to ensure they are in good and proper working condition. Any suspected damage to your bow should be inspected by Hoyt or a Genuine Hoyt Retailer for possible repair or replacement.

**WARNING:** Before you handle or shoot your bow or other archery products, Hoyt recommends that you be trained and instructed in the proper use by a certified archery coach. Sources such as USA Archery (www.usaarchery.org/usarchery/coaching/ Find-an-instructor.html), the National Field Archery Association (NFAA (www.nfaausa.com/state-organizations), and The Archery Trade Association (ATA (www.archerytrade.com) offer contact information for certified archery coaches in your area. Other archery associations in your area or country may also have suitable programs.

**WARNING:** An adult should always supervise minors when they are handling or shooting a bow.

**WARNING:** Never use alcohol or drugs while handling or shooting your bow.

**WARNING:** Always wear safety glasses when handling or shooting your bow.

**WARNING:** Never let go of the bow handle while drawing the bow, holding the bow at full draw, or shooting the bow. It is important that you are able to maintain a constant control over the bow at all times while handling and shooting the bow. Grip use of items such as hard leashes, screws, and bug repellant may limit your ability to maintain control of the grip.

**WARNING:** Always ensure that the area around your bow is clear of any and all obstructions to prevent items from being caught in the moving parts of the bow. When shooting your bow, never wear loose clothing, jewelry, or other items on your body that may get caught in the bow string or weight when the bow is shot.

**WARNING:** Never point or aim a bow at another person. Be sure of your target and what lies beyond. Never shoot arrows straight up into the air. Make sure that the path from where you are shooting is to the target and beyond is free from people and obstructions. The view that you see when looking through your sight while shooting (the sight picture) may not clearly show the trajectory path of the arrow.

**WARNING:** Never draw or shoot your bow while the bow is set up for dry firing the bow. Dry firing the bow means to shoot the bow without an arrow. Never try drawing a bow that is too heavy for your strength or that does not fit your draw length as this could lead to an uncontrolled dry fire. A dry fire could cause injuries should you be unable to quickly release the bow string or control your bow. Dry firing could cause severe injury if you are unable to control your bow. Dry firing could also cause severe injury on the range if you are unable to control your bow.

**WARNING:** Never draw or shoot your bow while the bow is set up for dry firing the bow. Dry firing the bow means to shoot the bow without an arrow. Never try drawing a bow that is too heavy for your strength or that does not fit your draw length as this could lead to an uncontrolled dry fire. A dry fire could cause injuries should you be unable to quickly release the bow string or control your bow. Dry firing could cause severe injury if you are unable to control your bow. Dry firing could also cause severe injury on the range if you are unable to control your bow.

**WARNING:** Never loosen your limb weight adjustment bolts more than 8 turns as this could cause the bow to violently disassemble. (Note: 10 turns is acceptable on certain youth bows. Consult Hoyt Customer Service for details.)

**WARNING:** Do not perform any maintenance, adjustments, or have any work performed at any kind of any part of your bow while drawing or during any of the after the shooting cycle. Do not allow others to work on or touch any part of your bow during the shooting cycle.

**WARNING:** Never shoot a bow with the incorrect arrow size [spine] or the incorrect arrow length. Shooting an incorrect arrow size or length could cause your arrow to break and cause death or serious injury to you or others. Hoyt recommends that you replace your string and cables after 2,000 shots or after two years, whichever comes first.

**WARNING:** Never shoot a bow with the incorrect arrow size (spine) or the incorrect arrow length. Shooting an incorrect arrow size or length could cause your arrow to break and could cause death or serious injury to you or others.

**WARNING:** Never shoot a damaged arrow. Before each shot, inspect your arrows for damage. See the specific arrow manufacturer’s warnings and instructions on proper arrow inspection methods. Discard all damaged arrows.

**WARNING:** Never let go of the bow handle while drawing the bow, holding the bow at full draw, or shooting the bow. It is important that you are able to maintain a constant control over the bow at all times while handling and shooting the bow. Grip use of items such as hard leashes, screws, and bug repellant may limit your ability to maintain control of the grip.

**WARNING:** Always ensure that the area around your bow is clear of any and all obstructions to prevent items from being caught in the moving parts of the bow. When shooting your bow, never wear loose clothing, jewelry, or other items on your body that may get caught in the bow string or weight when the bow is shot.

**WARNING:** Never aim a bow at another person. Be sure of your target and what lies beyond. Never shoot arrows straight up into the air. Make sure that the path from where you are shooting is to the target and beyond is free from people and obstructions. The view that you see when looking through your sight while shooting (the sight picture) may not clearly show the trajectory path of the arrow.

**WARNING:** Never draw or shoot your bow while the bow is set up for dry firing the bow. Dry firing the bow means to shoot the bow without an arrow. Never try drawing a bow that is too heavy for your strength or that does not fit your draw length as this could lead to an uncontrolled dry fire. A dry fire could cause injuries should you be unable to quickly release the bow string or control your bow. Dry firing could cause severe injury if you are unable to control your bow. Dry firing could also cause severe injury on the range if you are unable to control your bow.

**WARNING:** Never draw or shoot your bow while the bow is set up for dry firing the bow. Dry firing the bow means to shoot the bow without an arrow. Never try drawing a bow that is too heavy for your strength or that does not fit your draw length as this could lead to an uncontrolled dry fire. A dry fire could cause injuries should you be unable to quickly release the bow string or control your bow. Dry firing could cause severe injury if you are unable to control your bow. Dry firing could also cause severe injury on the range if you are unable to control your bow.

**WARNING:** Never draw or shoot your bow without all string accessories (sight, sight lever, button, points, D-Loop, string silencers, weight, and spool weight) properly attached and secured. Use only original Hoyt or factory certified clamp-on nocking point or string weight devices. Hoyt recommends that only a Genuine Hoyt Retailer install all string accessories. (See page 2 for definition of Hoyt Bow Safe Operating Parameters)

**WARNING:** Never expose your string or cables to sharp objects such as knives or broadband, or in direct heat sources such as open flame or extremely hot objects they could easily cut the string and/or cables to break.
WARNING: Never draw a bow with mismatched or missing cam modules, module screws and/or set screws. Never draw a bow with a missing or incorrectly installed draw stop peg. Never remove the cam control cable peg. Be sure to thoroughly check these areas of the cam with an allen wrench to ensure they are fully tightened and that modules are not mismatched.

WARNING: While servicing Hoyt compound bows, it may be necessary to remove and reinstall e-clips on the ends of the axles. It is critical that the e-clips are installed correctly. If e-clips are not installed correctly, it is likely that one or more of the limbs will work their way off the end of the axles, causing the bow to come apart and may result in injury to user or bystanders. [See page 15 for installation instructions]

WARNING: Do not draw or shoot bow without the cable guard, cable slide and/or rollers properly installed, adjusted and tightened.

WARNING: Only use genuine Hoyt manufactured replacement parts. Only Hoyt or a Genuine Hoyt Retailer should perform replacement of damaged parts. Hoyt recommends that all maintenance or service that requires the use of a bow press only be performed by a Genuine Hoyt Retailer. The use of an improper style bow press on your Hoyt bow or the incorrect use of any bow press on your bow may result in severe damage to the bow [see page 12 for definition of an appropriate style press for Hoyt bows].

WARNING: Never expose your Hoyt carbon bow to any solvents or lubricants as the structure could become weakened.

WARNING: Never expose your carbon bow to direct impact. If impact occurs, return your bow to Hoyt or take your bow to a Genuine Hoyt Retailer for inspection and required repair.

WARNING: Never expose your bow to extreme heat or prolonged moisture. Damage can occur to your bow from heat exposure, prolonged exposure to moisture and improper storage.

WARNING: This warning is given in compliance with California State Prop 65. This product contains chemicals known to the state of California to cause cancer, birth defects or other reproductive harm.

REQUIRES SAFE OPERATING PARAMETERS

WARNING: It is critical that your bow is set up and functioning within the bow’s required safe operating parameters prior to use. Hoyt recommends that only a Genuine Hoyt Retailer setup and inspect your archery equipment to ensure that it is set up within the bow’s safe operating parameters. After your bow is set up within the bow’s required safe operating parameters, the bow should be tuned (or re-tuned) for improved accuracy based on your shooting style and form, the arrow type and size used, and all other accessories used. See page 7 for tips and basic tuning procedures.

CAM SETTINGS

Both the top and bottom cam modules must be of the same cam type and size. Most Hoyt compound bows use a cam system that allows the module system for draw length adjustments, both the top and bottom cam modules must be a matching set and set in the same position (see photo B). For cams that have replaceable draw length modules, both the top and bottom modules must be a matching set and the cable draw stop peg must be in the correct position (see photo B). For cams with a rotating type module for draw length adjustment, the top and bottom cam modules must be a matched set and held in the same position (see photo B). For more information on specific types of cams, settings, adjustments, etc, see page 12.

CAM ACCESSORIES

CUSTOM ACCESSORIES

HOYT ARCHERY manufactures a broad selection of archery gear and accessories. Your Genuine Hoyt Retailer can help you choose, install and tune the proper gear and accessories for your style of shooting. Do not modify your bow to accommodate an accessory that is not meant for your bow.

ATTACHING BOW ACCESSORIES

Your Hoyt bow is equipped with various accessory mounting locations to allow accessories such as sights, quivers, arrow rests, and stabilizers to be to your bow. When attaching to your bow, follow all accessory mounting and use instructions provided by the accessory manufacturer. Ensure that all accessories are specifically right handed or left handed to match your bow where applicable and that all mounting hardware is securely tightened. Ensure that all attached accessories are clear of string and arrow flight path when the bow is shot.

Arrow Rest Setting

There are many different arrow rest designs and styles. Ensure the arrow rest is right handed or left handed based on your bow. On all Hoyt bows, arrow rests should be positioned on your bow so that your arrow nocking point is when the arrow is shot. For all Hoyt bows, the required safe operating position of the arrow rest is when the rest is not touching the bow string. For all Hoyt bows, arrow rests should be positioned on your bow so that the arrow rest is not touching the bow string. For all Hoyt bows, the required safe operating parameters of the arrow rest is when the rest is not touching the bow string.

D-LOOPS AND NOCKING POINTS

All bows require the use of a D-Loop or a nocking point device to properly locate the arrow onto the bow string. In relationship to the arrow rest. For all Hoyt bows, the required safe operating position of the D-Loop or the nocking point device is when the device is not touching the bow string and cannot move on the string or come off of the string during shooting. Other string accessories such as peep sights, string silencers, brass buttons or any other devices attached to the bow string or cables of your bow must be installed in such a way that they cannot move or come off of the bow string or cables during shooting. Hoyt recommends that only a Genuine Hoyt Retailer install and set-up any string accessories on your Hoyt bow.

COMPONENT BOW SETUP, TUNING AND MAINTENANCE

ACCESSORY SELECTION

Draw length is determined by many variables. Your Genuine Hoyt Retailer or is trained in proper fitting a Hoyt bow to a Hoyt bow. Hoyt offers two bow types of adjustable cams to fit archers needs: rotating inner-cam module cams and exchangeable module cams. Draw length is measured in inches using the ATA "tied-on" nocking point (see photo F for an example of a "tied-on" nocking point). Hoyt recommends that only a Genuine Hoyt Retailer install and set-up any string accessories on your Hoyt bow.

COMPOUND BOW SETUP, TUNING AND MAINTENANCE

ACCESSORY SELECTION

Hoyt Archery manufactures a broad selection of archery gear and accessories. Your Genuine Hoyt Retailer can help you choose, install and tune the proper gear and accessories for your style of shooting. Do not modify your bow to accommodate an accessory that is not meant for your bow.

DRAW LENGTH

Draw length is determined by many variables. Your Genuine Hoyt Retailer or is trained in proper fitting a Hoyt bow to a Hoyt bow. Hoyt offers two bow types of adjustable cams to fit archers needs: rotating inner-cam module cams and exchangeable module cams. Draw length is measured in inches using the ATA "tied-on" nocking point (see photo F for an example of a "tied-on" nocking point). Hoyt recommends that only a Genuine Hoyt Retailer install and set-up any string accessories on your Hoyt bow.

CUSTOM ACCESSORIES

Take your bow to the next level. Advanced accessories from Hoyt allow you to dial in your shot with a look and feel that’s all you
COMPOUND BOW SETUP, TUNING AND MAINTENANCE (continued)

[Archery Trade Association] standard method. Measure from the deepest part of the grip or to the center of the Berger Button (not mounting hole) plus 1/16”. See page 10 for detailed instructions on adjusting your bow’s draw length.

DRAW WEIGHT

Weight adjustments can easily be made by turning the weight adjustment bolt clockwise to increase weight or counter clockwise to decrease weight. To ensure your little star stays balanced turn the top and bottom adjustment bolts in equal amounts. Hoyt bows are capable of being reduced to 10 pounds lower than the peak weight. For example, a Hoyt bow with a 60 lb. max weight can be adjusted to as low as 50 lbs. Do not let out or loosen your limbs more than five turns (50 turns on Ignite Series bows) doing so may cause limbs to pop out during adjustment or while shooting causing serious injury to you or bystanders. Bows adjusted to their peak weight may draw up to four pounds heavier than the labeled max weight.

Note: It is not necessary to loosen the dowel screws to adjust the weight on any Hoyt bow. It is not necessary to lower the draw weight for storage purposes.

Note: It is normal for grease to be present on the pocket and rocker area of the bow.

CENTERSHOT ALIGNMENT

Centershot is the alignment of the arrow to the power-path of the string. The measurement from the Berger Button hole to the center of the arrow shaft should be the same in all shooting positions. Hoyt recommends that you take your bow to a Genuine Hoyt Retailer at least once a year for a professional maintenance, periodic inspection, adjustment and service. Hoyt recommends that you take your bow to a Genuine Hoyt Retailer at least once a year for a professional maintenance, periodic inspection, adjustment and service.

TUNING FOR BROADHEADS

Most bowhunters discover that they must make slight tuning or sight adjustments when switching from practice points to broadheads (even at the same weight). Broadheads create a dramatic aerodynamic change in arrow flight. For this reason, slight adjustments may need to be made in nocking point height, rest position or string position.

Note: When switching from practice points to broadheads (even at the same weight), a genuine Hoyt Retailer will be able to help you from start to finish with the entire tuning process.

FINE TUNING

Your setup and style of shooting (arrow type, fingers or release aid, arrow rest, etc.) determines the type and location of the nocking point. A good starting point is to adjust the nock point so the arrow and string make a 90-degree angle. This is only a starting point. Fine tuning adjustments to the nocking point may be needed.

Hoyt does not recommend the use of brass or other metal-clamp-on nocking point devices. Only a qualified archery pro shop should install string components.

LIMBSHOCK AND STRING SILENCERS

Some Hoyt bows come standard with limb dampers and/or string silencers to decrease vibration and noise. Inspect them periodically and replace when wear is evident. These dampers and silencers are not covered under warranty. Note: Always remove LimbShox before putting the bow in a bow press. STEALTH HD® STRING SUPPRESSOR

Stealth HD is a highly effective noise and vibration dampening system. For optimum performance, make sure the Stealth/HD rubber damper is just touching the string at brace height (no pressure). By loosening the screw on the damper, you can reduce the string noise in the system.

PAINT AND FINISH

The paint and finish on your bow requires very little maintenance. A few simple actions can help keep your bow looking new. Keep it clean by removing mud, dust and other contaminants from the finish by using a damp cloth. After use during wet conditions, towel-dry your bow to prevent water damage. Do not use a harsh source to dry your bow. Do not use chemicals, solvents or products such as bug repellents that may harm your bow’s finish. Any damage to the paint and finish caused by, but not limited to, chemicals, solvents, insect sprays, or other products will not be covered under warranty. Warranty coverage of paint and finish is limited to manufacturing defects only.

CAM LUBRICATION

Bows equipped with the Cam 8/1/2 Performance System feature sealed ball bearings, which do not require lubrication. For conventional bearings or bushings, such as those found on run Cam 8/1/2 (dual cam) equipped bows, a light spot lubrication of the axes where they pass through the cam should be done on a regular basis (1,500 - 2,000 shots). In adverse hunting conditions where dirt, dust or moisture is encountered, lubrication may be done on a daily basis. Be sure to clean off any excess lubricant as it will attract dirt and dust and could possibly damage painted surfaces. Hoyt recommends you use a silicone or Teflon based lubrication. It is NOT recommended that you use “Penetrating Oils” such as WD-40, EZ-#7, Fast Break, etc. as these products can damage your bow.

NOCK POINT LOCATION

Your setup and style of shooting (arrow type, fingers or release aid, arrow rest, etc.) will determine the type and location of the nocking point. A good starting point is to adjust the nock point so the arrow and string make a 90-degree angle. This is only a starting point. Fine tuning adjustments to the nocking point may be needed.

BOW MAINTENANCE

Your bow is a mechanical device and as such, is subject to wear and need of periodic inspection, adjustment and service. Hoyt recommends that you take your bow to a Genuine Hoyt Retailer at least once a year for a professional maintenance, periodic inspection, adjustment and service. Hoyt recommends that you take your bow to a Genuine Hoyt Retailer at least once a year for a professional maintenance, periodic inspection, adjustment and service. Hoyt recommends that you take your bow to a Genuine Hoyt Retailer at least once a year for a professional maintenance, periodic inspection, adjustment and service.
The ZT Cable Guard System™ is factory installed and requires no additional installation. The roller wheels feature sealed bearings that require no lubrication. If wax or dirt accumulate on the roller wheels, simply clean the wheels with a soft cloth.

Note: In order to remove both the split yoke buss cable and control cable from the ZT Cable Guard, the strings and cables must first be relaxed with the proper use of a bow press (see pg. 10) Once the cables are relaxed, the roller wheels and spacers can be removed by loosening and removing the shoulder bolt with a 5/32” Allen key, allowing the cables to be free.

When reassembling the unit, the roller wheels and spacers must be installed correctly. The larger side or flanged side of the bearing should face away from the bow’s shelf. One .050” spacer must be installed between the roller wheels and another one between the inner wheel and threaded mount.

When properly installed, the split yoke buss cable will route in the wheel track closest to the arrow and the control cable routes in the wheel track closest to the bow’s shelf. The cables are designed to cross at the roller wheels, but never touch one another. Install the cables into the proper wheel tracks before threading and tightening the screw to 15 in-lbs. Do not over tighten.

The ZT Cable Guard’s flexible limb assembly is maintenance free and should not be tampered with or adjusted. If the unit needs to be disassembled for cleaning purposes or installation of shock rods, loosen the button head screw with a 1/8” Allen key. The screw should be retightened to 12 in-lbs. Do not over tighten.

Do not loosen any part of the ZT Cable Guard system without first relaxing the cables by proper use of a bow press. (Pg. 10)

Do not draw or shoot the bow without the ZT Cable Guard and cables properly installed.
Before adjusting the cable guard, first remove the cables from the cable slide. Then loosen both of the spok'd head cap screws 1/2 turns with a 5/64" Allen key. Rotate the bar through the series of internal notches until the desired location is obtained. Retighten the screws to 20 in-lbs, and reinstall the cable slide. Do not tighten the screws unless the positioning marks line up with the desired setting. Before drawing or releasing the bow, make sure that all parts of the arrow are getting proper clearance. The arrow or arrow fittings should never come in contact with the cables throughout the draw cycle. If any part of the arrow or arrow fittings come in contact with the cables, readjust the bar to a further out setting to allow for more clearance.

CAUTION: Do not draw or shoot bow without the cable guard, CABLE SLIDE INSTALLATION
The cable guard bar attaches to the riser, making sure the bar is pushed completely through and flush with the end of the front mounting holes. After the bar has been installed, fasten with the 1/4-20 x 3/4" ARP screws provided. See photo E. The use of LockTite® is recommended when re-inserting screws.

PREVAIL CABLE GUARD SYSTEM
The Prevail Series bows come equipped with an adjustable cable guard to optimize arrow clearance and enhance tuning. The cable guard has four different settings (0, 3, 6, and 9 degrees) and comes factory set in the 0 setting.

If fletchings come in contact with the cables, readjust the bar to a further out setting.

Before drawing or shooting the bow, make sure that all parts of the arrow are obtained. Retighten the screws to 20 in-lbs. and reinstall the cable slide. Do not adjust the cable guard while the cables are still in the cable slide.

PREVAIL CABLE GUARD SYSTEM
The Prevail Series bows come standard with an adjustable cable guard to optimize arrow clearance and enhance tuning. The cable guard has four different settings (0, 3, 6, and 9 degrees) and comes factory set in the 0 setting.

3. Retighten the screws to 20 in-lbs. and reinstall the cable slide. Do not adjust the cable guard while the cables are still in the cable slide.

4. Before adjusting the cable guard, first remove the cables from the cable slide.

5. Then loosen both of the spok'd head cap screws 1/2 turns with a 5/64" Allen key. Rotate the bar through the series of internal notches until the desired location is obtained. Retighten the screws to 20 in-lbs, and reinstall the cable slide. Do not tighten the screws unless the positioning marks line up with the desired setting.

6. Before drawing or releasing the bow, make sure that all parts of the arrow are getting proper clearance. The arrow or arrow fittings should never come in contact with the cables throughout the draw cycle. If any part of the arrow or arrow fittings come in contact with the cables, readjust the bar to a further out setting to allow for more clearance.

CAUTION: Do not draw or shoot bow without the cable guard.

CABLE GUARD INSTALLATION
Some Hoyt bows are designed with a standard built-in cable guard bar installation. To install the cable guard bar, simply slide the bar through the two front mounting holes on the riser, making sure the bar is pushed completely

CABLE SLIDE INSTALLATION
To prevent your bow’s cables from rubbing against each other, Hoyt uses a specially designed cable slide that has offset cablelites. To correctly install the slide on most Hoyt bows, first place the glide on the cable guard bar (see photo E). Next, push the control cable into the shorter front slot. Then, push the bow cable into the longer rear slot.

DRAW LENGTH ADJUSTMENT FOR DFX, DFX TURBO AND POWERMAX CAMS
Both Top and Bottom Cam: To adjust the draw length of Hoyt’s DFX, DFX Turbo, PowerMax cams with a rotating inner-cam module with draw stop pegs, use a T-20 Torx Wrench to loosen both module screws 1.5 - 2 full turns (see Fig. A). There is no need to completely remove either of the module screws during adjustment.

Before installing the limb stop peg, first time/synchronize the cams using the draw stop pegs (black – top cam and red – bottom cam). After the cams have been properly timed, install the limps stop in the corresponding starting position that matches the module installed on the bow and draw the bow to ensure timing is correct. Additional adjustments may be needed to fine-tune the desired feel when at full draw.

NOTE: The limb stop peg must be removed before pressing the bow. Failure to do so could result in damage to your bow.

The limb stop is to be used in addition to the cable draw stop pegs that come installed in the cam. Once you have adjusted the module and cable draw stop pegs to the desired positions, simply install the limb stop into the inside slot start using a T-20" Allen key as shown in Fig. F. The alignment marks for the stop peg are a starting reference only and the limb stop may require adjustment from the starting position in order to achieve optimum feel and performance.

DRAW LENGTH ADJUSTMENT FOR ADJUSTABLE DRAW LENGTH BOWS [EXCEPT DFX CAMS. SEE PREVIOUS PAGE FOR DFX INSTRUCTIONS].
Follow the directions below to adjust the draw length on Hoyt bows equipped with a rotating inner-cam module such as those found on some Target bows and youth bows.

Top Cam: To adjust the draw length of Hoyt’s cams with a rotating inner-cam module like the one shown in Fig. E, use the appropriate wrench (some bows use an Allen key and others use a Torx wrench) to loosen the fastener wrench and remove the draw length screw (see Fig. E). Rotating the inner-cam module in the [+] direction will lengthen the draw. Rotating the inner-cam module in the [-] direction will shorten the draw. Each lettered position will provide approximately 1/2 inch longer/shorter draw than the previous setting. Once the inner-cam module is in the desired location, reinstall and tighten the draw-length screw first and then the fastening screw.

See next page for Bottom Cam adjustment procedure.
COMPONENT BOW SETUP, TUNING AND MAINTENANCE (continued)

Note: On dual cam systems, such as those found on the Tribute and youth model bows, repeat the top cam draw length adjustment instructions on the bottom rail instead.

Bottom Cam: Remove the draw length screw, rotate the inner-cam module to the last letter position. To relocate the top cam module, reinsert the draw length screw (see Fig. F on page 10). You must have both top and bottom inner-cam modules in the same lettered position before the bow will tune properly. It may be necessary to use Blue Loctite® on the inner-cam module screws to keep them secure. If your cam system is equipped with an optional draw stop peg, make sure it is installed in the corresponding letter to match the module position. For example, if the module on your cam is set in the C position, make sure the draw stop peg is installed in the C position. If the module is not in the correct position, the bow may not shoot straight.

WARNING: Hoyt draw a bow 48 inches or more and then remove the draw stop peg. Never draw a bow with a missing or incorrectly installed draw stop peg. Never remove the cam control cable peg as serious injury and bow damage could occur.

Exchangeable Module Adjustment: Follow the directions below to adjust the draw length on a Hoyt bow equipped with an exchangeable module [Hoyt Cam & 1/2 Performance Systems require very little maintenance. Once the shooting string, control cable and buss cable are set to the correct length, cam synchronizing should require little or no maintenance. Both top and bottom cam modules are slaved together via the control cable – forcing both cams to always move together, regardless of where the cables come into contact with the cable stops. There is a broad range where the cams can be synchronized. Hoyt Engineers and Hoyt Professional Shooters alike have found that varying the cam synchronization has little impact. This is primarily due to the crown type cam and cam synchronization is not critical in the range specified. To create a slightly “softer” wall at full draw. On the X3 and SVX cams you can remove the draw stop peg from the bottom cam to change the let-off. T o change the let-off on the bottom cam: Remove the bottom cam module and replace it with the desired let-off module. T o change the let-off on the top cam: Do not over-tighten the screws and remove the top cam module. Replace it with the desired let-off module. (Do not over-tighten the screws). Note: Blue Loctite® may be used on top and bottom cam module screws and set screws. Never draw a bow with a missing or incorrectly installed draw stop peg. Never remove the cam control cable peg as serious injury and bow damage could occur.

Bows to verify that the factory specifications (cam orientation, draw length, draw weight, brace height, axle-to-axle, etc.) are correct, use a proper bow press and remove the grip. The Serial number on the PowerMax series will be found under the grip. To locate, simply remove the two attachment screws and remove the grip. The Serial number on Hoyt compound bows is located on or near the arrow rest mount. If you have already attached a rest to your riser, you may have to remove it to see the serial number. The serial number on Hoyt Carbon bows is found between the mounting holes. The serial number on the PowerMax series is found under the cable guard bar.

Hoyt measures bowstrings using the ATA (Archery Trade Association) standard. X3 and SVX cams are available with either 65% or 74% let-off modules. Changing the let-off should be done by Hoyt or a Genuine Hoyt Retailer. To change the cam orientation on the bottom cam: Top and bottom cam modules are slaved together via the control cable – forcing both cams to always move together, regardless of where the cables come into contact with the cable stops. There is a broad range where the cams can be synchronized. Hoyt Engineers and Hoyt Professional Shooters alike have found that varying the cam synchronization has little impact. This is primarily due to the crown type cam and cam synchronization is not critical in the range specified. To create a slightly “softer” wall at full draw. On the X3 and SVX cams you can remove the draw stop peg from the bottom cam to change the let-off. T o change the let-off on the bottom cam: Remove the bottom cam module and replace it with the desired let-off module. T o change the let-off on the top cam: Do not over-tighten the screws and remove the top cam module. Replace it with the desired let-off module. (Do not over-tighten the screws). Note: Blue Loctite® may be used on top and bottom cam module screws and set screws. Never draw a bow with a missing or incorrectly installed draw stop peg. Never remove the cam control cable peg as serious injury and bow damage could occur.

WARNING: Hoyt draws a bow with a 48 inches or more and then remove the draw stop peg. Never draw a bow with a missing or incorrectly installed draw stop peg. Never remove the cam control cable peg as serious injury and bow damage could occur.

WARNING: Hoyt measures bowstrings using the ATA (Archery Trade Association) standard. X3 and SVX cams are available with either 65% or 74% let-off modules.
